Project Summary

The goal of this project is to have a fully functional website by the end of this 8 week course that displays my personal resumé. Not only will this count as my term project for CSS 405, but it will also be used for future employment opportunities. The resumé website should be clean and easy to read while displaying necessary information about my education, work experience, and career goals.

Project Details

Platform: World Wide Web

Languages: HTML 5, CSS 3, JavaScript, PHP

Sprint 2 Plan (CSS & More HTML)

The main goal for this sprint is to style the previously created html pages using an external cascading style sheet. Each page will contain a header, which will contain the page navigation menu. The index.html page will contain a footer. On the portfolio.html page, I will include links to the PDF copy of my resume. On the contact.html page I will contain a link to my LinkedIn profile. My aboutme.html page will have a background image, as well as a personal picture of me beside the about me text. I plan to experiment with Google Fonts in the stylesheet.css to help give my site a more professional and personal look.

Sprint 2 To-Do List For 7/9 With Time Estimates

- Style html pages with external style sheet – 10 + hrs (At least 10 hours)
 - Add custom background images for each html page
 - Add custom font to different elements of each page
 - Create customized page navigation menu in the header of all pages
- Add an HTML link to the portfolio.html page of my PDF resume – 10 mins
- Add personal photo to the aboutme.html page- 30 mins
- Prepare deliverable documentation for Sprint 2 Deliverable- 30 mins

Issues and Concerns

- I have some confusion about the way some of the cascading rules work with CSS. I suspect that styling my pages will be very time consuming. I plan to talk with Mrs. Lewis tonight after or during class to gain some clarity.
- I know that I will be occupied with prior commitments this coming weekend, so my plan is to get as much of the CSS completed during the week as possible.
